

Try.
Suffer.
Quit.

Yet another collaboration tool

Claims to be all-in-one, is mediocre at everything.

Sign up anyway

There are dozens of collaborative productivity tools on the market. Not that we are significantly better.

We just can't help building another one.

We have miserably spent 3 years of our lives and are still ashamed of the result.

Try.

Brace yourself, it won't be a smooth ride.

Create custom apps, breathe deeply.

Maybe, Fibery will be really good 2 years from now.

Learning Curve

Unfamiliar terms, new abstractions and an "original" API.

Missing Features

Automations, forms and external sharing, among other things.

Mobile Last

No Android or iOS apps, never tested on a touch screen.

Suffer.

Somehow you've managed to set this up.

It only gets worse from here

It's not just the creator who suffers, but everyone else too.

Intolerable Quality

No QA engineer, poor test coverage and 150+ open bugs.

Unpolished Interface

We cut corners to beat the deadline, sorry.

Unknown Uptime

Production cluster is a few weeks old, let's pray for the best.

Quit.

Why risk your reputation with unproven software?

Go with the tool that works!

Nobody ever got fired for buying Atlassian.

Notion

Pick for a better wiki, more flexible structure and desktop apps.

Airtable

Go for fast tables, diverse templates and an intuitive API.

Coda

Choose because of powerful formulas and automations.

But we have 🏠 mortgages...

Show mercy

Made for detractors.

Fibery requires too much attention to get started. It's also more expensive than our current tools, so we will stick with what we have.

Alex
Technical Product Manager

We've gone back to Jira, because it proved too hard for devs to get used to Fibery. Jira is also more stable and functional.

Anton
Founder

Any darn fool can make something complex. It takes a genius to make something simple.

Pete
Singer and political activist

Inspired by investors.

Back to boring
